1. Product introduction

The compact Grundfos CM Booster ensures optimal water pressure for domestic and commercial applications, such as clean water and raw-water supply, pressure boosting, irrigation and dewatering. The booster consists of a Grundfos CME or CM pump and a pressure control unit. The pressure control unit allows the pump to start and stop automatically according to demand.

- CMBE Booster offers constant pressure and high comfort thanks to the variable-speed motor, noiseless operation and built-in protection against dry running, overload, overtemperature and more.
- CMBE TWIN Booster has two pumps. Both pumps run, when there is need for a higher flow to maintain a constant pressure.
- CM Booster with a pressure manager protects the pump against dry-running and cycling, and reduces the number of starts and stops. Self-priming variants for a suction lift of 0-4 metres or 0-8 metres are also available.
- CM Booster with a diaphragm tank reduces the number of starts in case of low water consumption or leakage.
- CM Booster with pressure switch provides on/off operation.

Product range

Grundfos offers these CM Booster variants:

- CMBE TWIN, two-pump pressure boosting for constant pressure, including cascade control and pump alternation
- CMBE, a variable-speed pump for constant pressure
- CMB-SP PM 2, a self-priming pump with a pressure control unit, type Pressure Manager 2
- CMB PM 2, pump with a pressure control unit, type Pressure Manager 2
- CMB-SP PM 1, a self-priming pump with a pressure control unit, type Pressure Manager 1
- CMB PM 1, a pump with a pressure control unit, type Pressure Manager 1
- CMB PT, a CM pump with a horizontal or vertical pressure tank
- CMB PS, a CM pump with a pressure switch.

Fig. 1 CMBE / CMBE TWIN, CMB-SP PM 1 / PM 2, CMB PM 1 / PM 2, CMB PT and CMB PS

Applications

The boosters are designed to cover a wide range of applications from small domestic installations to small industrial systems. Typical applications:

- Pressure boosting for home and gardening
- water supply for agriculture and irrigation
- transfer and pressure boosting in break tank and rainwater applications
- water supply from shallow wells
- a twin solution for larger applications, such as apartment buildings, hospitals, hotels and small industrial plants.

Pumped liquids

The boosters are suitable for pumping clean, thin, non-aggressive and non-explosive liquids without solid particles or fibres. Examples:

- Drinking or tap water
- rainwater and condensate
- groundwater
- river and lake water
- boiler feed water and district heating water
- chlorinated water
- softened water
- washing and cleaning.

The pumps must not be used for transfer of diesel oil or other oil-containing liquids. Sand and other impurities in the water can cause wear to the pump.

Note: The type key cannot be used for ordering as not all combinations are possible.

Installation

Mechanical installation

Placing the pump above ground is generally a convenient way of establishing a water or rainwater supply.

Place the pump as close as possible to the water supply to make the inlet pipe as short as possible.

If a hose is used as inlet pipe, it must be non-collapsible. Fit a strainer to the inlet pipe to prevent solids from entering the pump.

The pump must be installed on a plane and solid surface and fixed so that it cannot be displaced during startup and operation. The inlet direction must be horizontal.

The pump must be installed with easy access for inspection, maintenance and service.

The pump must be installed in a well-ventilated location. When installed outdoors, the booster must be provided with a suitable cover. The cover must be sufficiently large to ensure that the motor is not exposed to direct sunlight, rain or snow. Inlet pipe
If the pump is to pump water from a well, borehole or similar, always fit a non-return valve on the inlet pipe of the pump.

The length of the inlet pipe of self-priming pumps must not exceed the length stated in fig. 2. The maximum length depends on the geodetic suction lift. As shown in the example below, if the suction lift is 2.5 m, then the length of the inlet pipe must not exceed 25 m.

Fig. 2 Recommended maximum suction lift or maximum inlet pipe length (Y-axis)

Install the inlet pipe in such a way that bends, airlocks and any unnecessary restrictions to the flow are avoided. See fig. 3.

Fig. 3 Pipe recommendations

Long inlet pipes affect the performance of the pump. The diameter of the inlet pipe must not be smaller than that of the inlet port. When the inlet pipe is longer than 10 metres or the suction lift is greater than 4 metres, the diameter of the inlet pipe must be larger than that of the inlet port.

The time from when the pump is started until it delivers water depends on the length of the inlet pipe and on the suction lift. Do not allow the pump to run for more than five minutes before it delivers water as the heat generated will damage the pump.

TM04 0438 0608

TM05 5410 3813

Self-priming CM Booster sets

Note: The following applies only to self-priming CM Boosters delivered as sets.

TM05 9410 3813

Fig. 4 Self-priming CM Booster

The length $H_{1,b}$ of the outlet pipe must be minimum 0.2 metres. See fig. 4. By increasing $H_{1,b}$, a suction lift up to 8 metres can be achieved. Use the table below to determine the necessary outlet pipe length for your desired suction lift.

Outlet pipe length $H_{1,b}$ [m]	Resulting suction lift H_2 [m]
≥ 0.35	5
≥ 0.5	6
≥ 0.6	7
≥ 0.7	8

Install the pressure manager on the outlet side of the pump. It incorporates a non-return valve.

We recommend to install the unit so that the height between the unit and the highest tapping point, $H_{1,a}$, does not exceed the values in the table below. See fig. 4.

Pressure manager	Start pressure [bar]	Maximum height $H_{1,a}$ [m]
PM 1-15	1.5	10
PM 1-22	2.2	17
PM 2	1.5	11
	2	16
	2.5	21
	3	26
	3.5	31
	4	36
	4.5	41
	5	46

Operating conditions

The maximum time of operation against a closed outlet valve is limited by the liquid temperature which must not exceed +40 °C (104 °F).

The maximum inlet pressure depends on the pump head at the actual duty point. The sum of the inlet pressure and the pump head must not exceed the maximum system pressure.

Electrical installation

The electrical connection and protection must be carried out in accordance with local regulations.

- The pump must be connected to an external main switch with a minimum contact gap of 3 mm in all poles.
- Make sure that the pump and the pressure control unit are suitable for the power supply to which they are to be connected.
- The pump and pressure control unit must always be correctly earthed.
- Single-phase standard Grundfos Boosters incorporate thermal protection and therefore require no external protection.
- Single-phase Grundfos Boosters require no external motor protection. The variable-speed motor incorporates thermal protection against slow overloading and blocking.
- Three-phase Grundfos Boosters require external motor protection in accordance with local regulations. The electrical installation of the pressure control unit must be carried out so that the enclosure class is maintained.

Selection guide for residential applications

The following instructions primarily target residential applications. This is a quick and easy guide to show you which product is ideal for your needs. Follow the charts and instructions and you will be sure to get a perfect fit.

Example: Sizing and selection

A: Required comfort level

- Adjustable constant pressure.

B: Find the right booster

- How many taps? 6.
- How many floors? 3.

Result: CMBE 1-75

TM05 9319 3713

Number of floors	Number of taps			
	1-5	6-10	11-20	21-50
4	CMBE 1-75	CMBE 1-75	CMBE 3-62	CMBE 3-93
3	CMBE 1-44	CMBE 1-75	CMBE 3-62	CMBE 3-62
2	CMBE 1-44	CMBE 1-44	CMBE 3-62	CMBE 3-62
1	CMBE 1-44	CMBE 1-44	CMBE 3-30	CMBE 3-62

Fig. 5 Sizing and selection

Booster sizing and selection

Preconditions:

- A tap pressure of 3 bar is considered, to achieve a pressure of 4 bar, add two floors.
- If the inlet is flooded: In suction operation (CM booster SP) add more floors to compensate for head loss.
- 0.5 l/s per tap average usage pattern is taken into account.

Grundfos cannot be held responsible for wrong sizing based on this guide.

Selection guide for commercial applications

The following instructions primarily target commercial applications.

The CMBE TWIN Booster is the recommended product for commercial applications in large buildings, small industrial plants and businesses, agriculture and irrigation. See examples and calculations below.

Note: Local legislation must always be taken into account.

Flow rate

The total consumption and the required maximum flow rate depend on the application in question. The required maximum flow rate can be calculated by means of the table below which is based on statistical data.

Consumer	Unit [n]	Q_{year}	Consumption period [d]	Q_{day}	fd^*	$Q(m)_{\text{day}}$	ft^{**}	Max. flow rate
		m^3/year	days/year	m^3/day		m^3/day		m^3/h
Residence building	Residents (2.5 persons)	183	365	0.5	1.3	0.65	1.7	0.046
Office building	Employee	25	250	0.1	1.2	0.12	3.6	0.018
Shopping centre	Employee	25	300	0.08	1.2	0.1	4.3	0.018
Supermarket	Employee	80	300	0.27	1.5	0.4	3.0	0.05
Hotel	Bed	180	365	0.5	1.5	0.75	4.0	0.125
Hospital	Bed	300	365	0.8	1.2	1.0	3.0	0.12
School	Pupil	8	200	0.04	1.3	0.065	2.5	0.007

* fd : Maximum consumption factor per day.

** ft : Maximum consumption factor per hour.

Example: Hotel with 540 beds

Number of beds: n.

Total annual consumption: $Q_{\text{year}} \times n$.

Consumption period: d.

Average consumption per day: $(Q_{\text{year}} \times n)/d$.

Maximum consumption per day: $Q(m)_{\text{day}} = fd \times Q_{\text{day}}$.

Required maximum flow rate per hour: $Q_{\text{max}} = \text{maximum flow rate/hour} \times \text{number of beds}$.

Calculation

n = 540 beds.

$Q_{\text{year}} \times n = 180 \times 540 = 97,200 \text{ m}^3/\text{year}$.

d = 365 days/year.

$(Q_{\text{year}} \times n)/d = 97,200/365 = 266.3 \text{ m}^3/\text{day}$.

$Q(m)_{\text{day}} = fd \times Q_{\text{day}} = 1.5 \times 266.3 = 399.4 \text{ m}^3/\text{day}$.

$Q_{\text{max}} = \text{maximum flow rate/hour} \times \text{number of beds} = 0.125 \times 540 = 67.5 \text{ m}^3/\text{h}$.

2. CMBE TWIN

CMBE TWIN Booster

TM06 8671 1017

Fig. 6 CMBE TWIN Booster

Applications

The compact Grundfos CMBE TWIN Booster is suitable for clean water supply and pressure boosting in domestic and commercial applications. The CMBE TWIN Booster keeps a constant pressure in the pipe system and is mainly used in places such as:

- two-family houses
- cluster homes
- blocks of flats
- schools
- small hotels
- small office buildings
- small industrial plants and businesses
- hospitals
- agriculture and irrigation.

Product Description

The CMBE TWIN Booster system consists of two CMBE Boosters connected in parallel and mounted on a common base plate.

Accessories:

- vibration dampers (PN 99217259)
- inlet/outlet pipes with ball valve and unions and 1 1/2" outlet connection.
(PN 99229422 for 1" inlet connection)
(PN 99229453 for 1 1/4" inlet connection)

TM06 8740 1017

Fig. 7 Accessories

Motor

No external motor protection is required. The MGE motor incorporates thermal protection against slow overloading and blocking (TP 211 according to IEC 34.11).

Features

- Constant pressure via integrated speed control
- cascade control and pump alternation
- dry-running protection
- compact
- robust, stainless steel design
- easy installation
- low energy consumption
- noise level below 55 dBA and even lower at controlled speed.

Constant pressure

The integrated speed controller keeps a constant pressure in the pipe system. A pressure sensor monitors changes in the water consumption and signals to the speed controller to adjust the motor speed up or down.

Cascade control

Cascade control ensures that the performance of the booster system is automatically adapted to the consumption by switching pumps on or off and by changing the speed of the pumps in operation. The system runs as energy-efficiently as possible with a constant pressure and only the number of pumps required.

Pump alternation

Pump alternation ensures that the operating hours are distributed evenly on the pumps over time. CMBE TWIN Booster automatically alternates the pumps and will start the available pump with the lowest number of running hours since the last time the power was switched off.

Dry-running protection

Dry-running protection is very important as dry running may damage the bearings and shaft seals. Lack of inlet pressure or water shortage is indicated by the motor speed. When dry running is detected, the CMBE Booster will stop and go into alarm mode.

Easy installation

The booster is easy to install. When the booster has been connected to the pipes, it is all a matter of plugging the plug into a socket, and the system is operational.

Operating conditions

System pressure	Max. 10 bar.
Suction lift	Max. 1 m, including suction-pipe pressure loss at a liquid temperature of +20 °C.
Liquid temperature	0-60 °C.
Ambient temperature	Max. +55 °C. Min. -20 °C.
Relative humidity	Max. 95 %.
Enclosure class	IP55.
Insulation class	F.
Sound pressure level	The sound pressure level of the pump is below 55 dB(A).
Supply voltage	1 x 200-240 V, 50/60 Hz.
Start/stop frequency	Max. 100 per hour.
Cut-in pressure	0.5 bar below setpoint.

Electrical data

Pump type	Voltage [V]	I _{max} [A]	P ₁ [W]	Plug type
CMBE 3-30	1 x 200-240	6.7 - 5.6	688	Schuko or fuse box
CMBE 3-62	1 x 200-240	6.7 - 5.6	1210	
CMBE 3-93	1 x 200-240	9.1 - 7.6	1720	
CMBE 5-31	1 x 200-240	6.7 - 5.6	1090	
CMBE 5-62	1 x 200-240	9.1 - 7.6	1720	

Approvals

The product is built according to European drinking water approvals.

Wetted parts

The table below specifies the parts of the pump that are in contact with the pumped liquid.

Designation	Material	Technical description
Pump sleeve	Stainless steel	EN 1.4301 AISI 304
Impeller	Stainless steel	EN 1.4301 AISI 304
Diffuser	Technopolymer	PP 20 % Talc
Ejector	Technopolymer	PPE/PS 20 % GF

TM06 8495 0817

3. CMBE

CMBE Booster

Fig. 9 CMBE Booster

Applications

The compact Grundfos CMBE Booster is suitable for clean water supply and pressure boosting in domestic and light commercial applications.

The CMBE Booster keeps a constant pressure in the pipe system and is mainly used in places such as:

Application	CMBE 1	CMBE 3	CMBE 5	CMBE 10
Single-family houses	•	•	○	○
Two-family houses	○	•	•	•
Cluster homes		•	•	•
Blocks of flats		•	•	•
Schools		•	•	•
Small hotels/guest houses		•	•	•
Small office buildings		•	•	•
Agriculture		○	•	•
Irrigation		○	•	•

- Recommended
- Applicable.

Product Description

The CMBE Booster consists of these components:

- CMBE pump with integrated frequency converter
- 5-way fitting with non-return valve
- diaphragm tank
- pressure gauge
- pressure sensor
- inlet pressure switch (optional).

Motor

No external motor protection is required. The MGE motor incorporates thermal protection against slow overloading and blocking (TP 211 according to IEC 34.11).

Features

- Constant pressure via integrated speed control
- dry-running protection
- compact
- robust, stainless steel design
- easy installation
- low energy consumption
- noise level below 55 dBA and even lower at controlled speed.

Constant pressure

The integrated speed controller keeps a constant pressure in the pipe system. A pressure sensor monitors changes in the water consumption and signals to the speed controller to adjust the motor speed up or down.

Dry-running protection

Dry-running protection is very important as dry running may damage the bearings and shaft seals. The inlet pressure of the system or the water level in a possible tank on the inlet side is monitored. Lack of inlet pressure or water shortage is indicated by the motor speed. When dry running is detected, the CMBE Booster will stop and go into alarm mode.

Easy installation

The booster is easy to install. When the booster has been connected to the pipes, it is all a matter of plugging the plug into a socket, and the system is operational.

Operating conditions

System pressure	Max. 10 bar.
Suction lift	Max. 1 m, including suction-pipe pressure loss at a liquid temperature of +20 °C.

Fig. 11 CM Booster PM 2

The self-priming Grundfos CM Booster supplied with a PM 2 pressure manager is a compact booster for water supply in domestic applications. The pressure manager allows the pump to start and stop automatically according to demand and protects the pump from dry running.

The CM Booster is very easy to install. When the booster has been connected to the pipes, it is all a matter of plugging the plug into a socket, and the system is operational.

Applications

Grundfos self-priming CM PM 1 Booster is mainly used for domestic and light commercial water supply or booster systems.

Application	CMB1	CMB3	CMB5
Single-family houses	•	•	○
Two-family houses	○	•	•
Cluster homes		•	•
Blocks of flats		•	•
Schools		•	•
Small hotels/guest houses		•	•
Small office buildings		•	•

- Recommended
- Applicable.

Motor

CM Booster pumps have built-in current- and temperature-dependent motor protection in accordance with IEC 60034-11 and require no further motor protection.

Features

- Compact
- self-priming within five minutes
- easy installation
- dry-running protection
- anti cycling (leakage detection).

Versions

CMB-SP is available in two versions:

- Standard version with pressure manager factory mounted on the pump. This version allows a suction lift of maximum 4 m.
- Kit version, called CMB-SP SET, without pressure manager mounted on the pump. This version allows a suction lift of maximum 8 m if there is a pipe between the pump and the pressure manager of at least 0.7 m. The kit version is capable of suction lift between 0 and 8 m depending on the pipe length between pump and pressure manager.

Operating conditions

System pressure	Max. 10 bar.
Suction lift (H2) See fig. 4 page 7	0 < H2 ≤ 4 m (standard version). 4 < H2 ≤ 8 m (Set version). Including suction-pipe pressure loss at a liquid temperature of +20 °C.
Liquid temperature	0-60 °C.
Ambient temperature	Max. +55 °C. Min. -20 °C.
Relative humidity	Max. 95 %.
Enclosure class	IP55.
Insulation class	F.
Sound pressure level	The sound pressure level of the pump is below 55 dB(A). Note: During priming the sound level may be higher.
Supply voltage	1 x 220-240 V, 50 Hz.
Start/stop frequency	Max. 100 per hour.
Cut-in pressure	1.5 - 5 bar (adjustable).

Electrical data

Pump type	Voltage [V]	I _{max} [A]	P ₁ [W]	Plug type
CMB-SP 1-27	1 x 220-240	2.4 - 1.8	377	Schuko, AU or without plug
CMB-SP 1-36	1 x 220-240	3.1 - 2.8	400

8. CMB PT

CM Booster pressure tank

Fig. 15 CM Booster PT

The Grundfos CM Booster PT is an automatic booster system for water supply in domestic and agricultural applications as well as other installations where small leakages are expected to occur.

The booster system consists of a Grundfos CM pump, a pressure tank and a pressure switch assembled into one unit. The tank is delivered with the product and is easily connected to the CM pump.

The system is now ready for use, with preset start pressure and compliant tank precharge pressure. The pressure band is approximately 1 bar.

When the system has been connected to the pipes, it is all a matter of inserting the plug into a power supply socket, and the system is operational.

Applications

The Grundfos CM PT Booster is mainly used for agricultural and light commercial water supply and similar water installations where minor leakages can be expected.

Application	CMB 1	CMB 3	CMB 5

Motor

Single-phase CM pumps incorporate current- and temperature-dependent motor protection according to IEC 60034-11 and require no external motor protection.

Three-phase CM pumps do not incorporate motor protection. The CM pumps require external motor protection.

Features

- CM pump
- pressure tank to minimise the number of pump starts
- motor protection (single-phase only)
- automatic operation.

Operating conditions

System pressure	Max. 10 bar.
Suction lift	Max. 1 m, including suction-pipe pressure loss at a liquid temperature of +20 °C.
Liquid temperature	0-60 °C.
Ambient temperature	Max. +50 °C. Min. -20 °C.
Relative humidity	Max. 95 %.
Enclosure class	IP44.
Insulation class	F.
Sound pressure level	The sound pressure level of the pump is below 55 dB(A).
Supply voltage	1 x 220-240 V, 50 Hz. 3 x 220-240 / 380-415 V, 50 Hz.
Start/stop frequency	Max. 100 per hour.
Cut-in pressure	1.5 bar.

All pumps are fitted with a 1.5 m cable.

Approvals

The product is built according to European drinking water approvals.

Wetted parts

The table below specifies the parts of the pump that are in contact with the pumped liquid.

Designation	Material	Technical description
Pump sleeve	Stainless steel	EN 1.4301 AISI 304
Impeller	Stainless steel	EN 1.4301 AISI 304
Diffuser	Technopolymer	PP 20 % Talc
Ejector	Technopolymer	PPE/PS 20 % GF
Nozzle	Stainless steel	EN 1.4301 AISI 304
Shaft	Stainless steel	EN 1.4301 AISI 304
Shaft seal	Carbon with resin/ceramic	CVBP
Filling plug	Technopolymer	PES 30 % GF
Drain plug	Technopolymer	PES 30 % GF

9. CMB PS

CM Booster with pressure switch

Fig. 16 CM Booster PS

The Grundfos CM PS Booster PS is an automatic booster for water supply in domestic and agricultural applications as well as other installations where small leakages are expected to occur.

The booster system consists of a Grundfos CM pump, a 5-way valve and a pressure switch. A pressure tank must be fitted to complete the booster system. Use your own pressure tank or order one of the Grundfos GT tanks that make a perfect fit for your booster system.

The pressure band is approximately 1 bar.

When the system has been connected to the pipes, it is all a matter of inserting the plug into a power supply socket, and the system is operational.

Applications

The Grundfos CM PS Booster is mainly used for agricultural and light commercial water supply and similar water installations where minor leakages can be expected.

Motor

Application	CMB 1	CMB 3	CMB 5	CMB 10
Agriculture	•	•	•	•
Irrigation	•	•	•	•
Single-family houses	○	○	○	○
Two-family houses	○	○	○	○
Cluster homes	○	○	○	○
Blocks of flats	○	○	○	○
Schools	○	○	○	○
Small hotels or guest houses	○	○	○	○
Small office buildings	○	○	○	○

- Recommended
- Applicable.

Single-phase motors

Single-phase CM pumps incorporate current- and temperature-dependent motor protection according to IEC 60034-11 and require no external motor protection.

Three-phase motors

Three-phase CM pumps do not incorporate motor protection and therefore require external motor protection.

Features

- CM pump
- pressure tank to minimise the number of pump starts
- motor protection (single-phase only)
- automatic operation.

Operating conditions

System pressure	Max. 10 bar.
Suction lift	Max. 1 m, including suction-pipe pressure loss at a liquid temperature of +20 °C.
Liquid temperature	0-60 °C.
Ambient temperature	Max. +55 °C. Min. -20 °C.
Relative humidity	Max. 95 %.
Enclosure class	IP44.
Insulation class	F.
Sound pressure level	The sound pressure level of the pump is below 62 dB(A).
Supply voltage	1 x 220-240 V, 50 Hz. 3 x 220-240 / 380-415 V, 50 Hz.
Start/stop frequency	Max. 100 per hour.
Cut-in pressure	1.5 bar.

Accessories

The vital components from the booster solutions are also available as stand-alone products. They can be combined with any pump to create a booster system.

Grundfos Pressure Manager

Grundfos PM 1 and PM 2 pressure managers are designed for automatic start/stop control of Grundfos pumps and other water supply pumps.

PM 1

The PM 1 is suitable for applications where start/stop of the pump according to consumption is needed. It is the basic control solution offering start at 1.5 or 2.2 bar.

The PM 1 starts the pump when the start pressure is reached, and the pump keeps running as long as there is flow.

The PM 1 offers dry-running protection and cycling alarm for increased safety.

Fig. 17 PM 1

TM05 9266 3713

PM 2

The PM 2 is the all-round control solution offering adjustable start at 1.5 to 5 bar. This enables customisation to different types of installations and ensures a high level of comfort.

The start pressure is set by means of DIP switches located behind the control panel whereas the current pressure is indicated on the LED display on the front of the PM 2.

The PM 2 starts the pump when the start pressure is reached, and the pump keeps running as long as there is flow.

The PM 2 can be optimised for operation with an external pressure tank by enabling the 1 bar differential-pressure function. This function significantly reduces the number of operating hours of the pump in installations with a pressure tank.

Fig. 18 PM 2

TM05 9267 3713

Note: For further information, see the data booklet for Grundfos Pressure Manager.

Grundfos pressure tanks

Grundfos GT pressure tanks are long-life tanks, which are ideally suited for controlling the pressure in domestic as well as industrial applications.

GT-U, bladder

The pressure tank body is made of steel and is precharged with nitrogen from factory. All parts in contact with water are either made of stainless steel or coated for protection against corrosion. The replaceable bladder for tanks with a volume exceeding 60 litres is made of high-quality rubber material suitable for potable-water applications, such as booster systems, pressurisation and water hammer arresting.

TM05 5088 3212 - TM05 5087 3212

Fig. 19 GT-U bladder tank**GT-H, diaphragm**

The polypropylene liner combined with an FDA-approved high-grade butyl diaphragm makes up the water chamber. This is held against the tank wall with a steel clench ring. The brass air valve, sealed by a threaded O-ring valve cap, prevents air leaks.

TM05 5085 3212 - TM05 5086 3212

Fig. 20 GT-H diaphragm tanks

Note: For further information, see the data booklet for Grundfos pressure tanks.

Inlet/outlet pipe kits for CMBE TWIN

Inlet and outlet pipe kits are available for the CMBE TWIN booster. All pipe kits include ball valve and unions and 1 1/2" outlet connection. The inlet connection is available in two sizes.

Type	Product Numbers
1" inlet connection	PN 99229422
1/4" inlet connection	PN 99229453

Vibration damper kit for CMBE TWIN

The vibration dampers are mounted on the base plate of the CMBE TWIN booster. We also recommend to support the pipes with a vibration damper.

Type	Product Numbers
Vibration dampers	PN 99217259

11. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

<http://product-selection.grundfos.com>

"SIZING" enables you to size a pump based on entered data and selection choices.

"REPLACEMENT" enables you to find a replacement product. Search results will include information on the following:

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the Grundfos Product Center website interface. At the top, there is a navigation bar with links: HOME, FIND PRODUCT, COMPARE, YOUR PRODUCTS, SAVED ITEMS, and HELP. Below this is a search bar with the text "Find product number or a whole or partial product name" and a "SEARCH" button. The main content area features four large buttons: "SIZING" (with a subtext "Enter pump sizing"), "CATALOGUE" (with a subtext "Products and services"), "REPLACEMENT" (with a subtext "Replace an old pump with a new"), and "LIQUIDS" (with a subtext "Find pump by liquid"). Below these buttons is a "QUICK SIZING" section with a form for "Enter duty points" (Flow (Q) and Head (H)) and a "Select what to size by:" section with radio buttons for "Size by application", "Size by pump design", and "Size by pump family". A "START SIZING" button is also present. At the bottom, there is a link to "ADVANCED SIZING" and a note about "Advanced sizing by application" and "Custom selection".

"CATALOGUE" gives you access to the Grundfos product catalogue.

"LIQUIDS" enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.

Subject to alterations.
