41	I/O option extension adapter
41	DDCS communication option modules
41	Remote monitoring access worldwide
42	EMC – electromagnetic compatibility
43–45	Sine filters
46–49	Brake options
50	ACS880-604 3-phase dynamic brake units
51	DC-DC converter
53–54	du/dt filters
55	Dimensioning tool for selecting the optimal drive
56–59	Summary of features and options
60–61	Drive services

When your electric motor-driven application requires dependable capability and scalability to meet your exact requirements for variable speed operation, you need our ACS880 industrial drives. Our drives are built to truly understand and refine your business and cover every possible application. We make your opportunities work with our strong drives series that covers all your process control needs no matter what your industry. These are our ACS880 industrial drives, our benchmark of uncompromising productivity, serving you locally on a global scale.

Simplifying your world without limiting your possibilities

Drive modules

The all-compatible drives are designed to provide customers across industries and applications with unprecedented levels of compatibility and flexibility. The ACS880 drive modules are customized to meet the precise needs of industries such as metals, oil and gas, mining, marine, material handling, pulp and paper. They control a wide range of applications such as cranes, conveyors, pumps and fans.

Direct torque control (DTC)

ABB's signature motor control technology provides precise speed and torque control for all applications and virtually any type of AC motor.

[See page 33](#)

Application control programs

A range of ready-made programs to optimize productivity and usability in applications such as cranes, winches and artificial lifting.

[See page 34](#)

Removable memory unit

Stores all the software and parameter configurations in an easily replaceable and simple-to-install module.

[See page 33](#)

Energy efficiency

The drive provides features such as an energy optimizer and energy efficiency information that help you monitor and save the energy used in the processes.

[See page 33](#)

Remote monitoring

With a built-in Web server, NETA-21 makes worldwide access easy for industry applications.

[See page 41](#)

Robust, long lifetime design

The ACS880 is designed to last for a long time, even in harsh conditions. The benefits for you include a nine-year service interval and good tolerance to vibration and contamination.

Wide range of safety features

Safe torque off is built-in as standard. An optional safety functions module provides extended safety functions, simplifying the configuration and reducing installation space.

[See page 38](#)

Drive application programming

Customizable to meet the precise application needs based on IEC 61131-3. Uses the same programming environment and is also easy to integrate with other ABB components such as PLCs and HMIs.

[See page 39](#)

Drives going mobile

We offer several smartphone applications to ease and enhance the use of ABB drives. These tools provide a user-friendly and easy-to-use approach for the commissioning, servicing and use of ABB drives.

[See page 10](#)

Intuitive human-machine interface

Intuitive, high-contrast and high-resolution display enabling easy navigation in multiple languages.

[See page 37](#)

Startup and maintenance tool

Drive composer PC tool for drive startup, configuration and daily use and process tuning. PC tool is connected to the drive via Ethernet or USB interface.

[See page 37](#)

Communication with all major automation networks

Fieldbus adapters enable connectivity with all major automation networks.

[See page 40](#)

Flexible product configurations

Drives are built to order with a wide range of options such as braking options and different enclosure variants.

[See product variant pages](#)

Extended connectivity

In addition to the standard interfaces, the drive has three built-in slots for additional input/output extension modules and speed feedback interfaces.

[See page 41](#)

What does all-compatible mean for you?

Business all-compatible

The all-compatible drives are not just equipment – they are part of your business strategy. Providing better control over your processes, our drives mean lower energy consumption, improved productivity, flexibility and ease of use. In addition to drives, we offer a wide range of products and services to support your business. With offices in over 90 countries and a global technical partner network, we are in a good position to offer technical advice and local support, worldwide.

Process all-compatible

The drives are compatible with all kinds of processes. They control virtually any type of AC motor, provide extensive input/output connectivity and support all major fieldbus protocols. The drives cover a wide voltage and power range. Control performance is scalable from basic to demanding applications, delivered by direct torque control (DTC). The flexibility and scalability of the drives enable one drive platform to control virtually any application or process, making your drive selection easy.

Environment all-compatible

There is increased demand for industries to reduce their impact on the environment. Our drives can help you reduce energy consumption in a wide range of applications. Our drives have an energy optimizer feature that ensures maximum torque per ampere, reducing energy drawn from the supply. The built-in energy efficiency calculators help you to analyze and optimize your processes. We can help you to investigate the energy-saving potential of selected applications with our six-step energy appraisal.

Our wall-mounted ACS880 industrial drives fulfill the highest IE2 drive (EN 50598-2) energy efficiency class, further reducing environmental impact. In addition, all ACS880 industrial drives are compatible with high-efficiency IE4 motors.

Human all-compatible

All our drives share easy-to-use interfaces, saving you time during drive commissioning and maintenance. When you have learned it once, you can use it with all the drives in our all-compatible drives portfolio.

The control panel supports over 20 languages. With the PC tool, you get extensive drive monitoring capabilities and quick access to the drive settings. Integrated and certified safety features provide safety for machine operators.

To further improve the user experience, we have developed mobile apps that can be utilized in interacting with the drive. These apps give you an easy graphical interface for management, maintenance and service of your drives.

Cost and time savings with drive-based functional safety

With our ACS880 drive, you can achieve SIL 3/PL e safety level with certified safety functions modules. The safety module is easy to integrate inside the drive and offers you several safety functions. Integration with automation systems is quick and reliable using PROFI-safe connectivity. ACS880 drives have a safe torque off (STO) function as a standard.

Scalable safety with PROFI-safe and Safety PLC

The safety functionality can be scaled to your needs. From a safety module integrated into a single relay to a complete safety system with a PROFI-safe and a safety PLC, eg, AC500-S.

Safely limited speed without encoders

The SIL 3/PL e certified safely-limited speed (SLS) function prevents the motor from exceeding a defined speed limit with no encoders. This allows machine interaction to be performed at a safe speed without stopping the process.

TÜV-certified safety design tool

Functional safety design tool (FSDT-01) is used for machinery safety. It helps to increase the safety of users in the vicinity of machines. You can perform functional safety modeling, design, calculations and verification for machine functional safety.

Drive-based application programming

The built in PLC capability of the ACS880 provides you a possibility to customize the drive for your application without the cost of extra hardware. As programming is based on the IEC 61131-3 standard used in AC500 PLCs and by many other PLC vendors, you do not need to retrain your staff. By decentralizing your machine control closer to the process, you achieve better control performance.

Adaptive programming

Adaptive programming is ideal for creating simple control programs for various applications. It does not require expertise in programming and is offered as a standard in All-compatible drives.

Application programming

Application programming makes it possible for system integrators and machine builders to integrate their desired functionality and know-how directly into the drive. It utilizes standard IEC 61131-3 programming used by many PLCs like the AC500. This means that programs can be easily moved from the drive to a PLC and extended into a larger system.

Automation builder

Automation Builder is a software suite for automation engineering, which makes programming industry devices such as drives, PLCs, robots and human-machine interfaces (HMIs) easy using one integrated engineering suite. Automation builder is used both for engineering devices and entire automation projects.

Save time, ease troubleshooting and improve drive performance with ABB smartphone apps

Better connectivity and user experience with Drivetune

Easy and fast access to product information and support

Manage your drives and the process lines and machines they control

Easy access to cloud-based drive and process information from anywhere via an online connection

Start up, commission and tune your drive and application

Simplified user guidance with instant access to drive status and configuration

Performance optimization via drive troubleshooting features and fast support

Services and support on the go with Drivebase

Search for support documents and contacts

Maintain and service all your installed drives on one or multiple sites

Get 6 months extra warranty for free by registering your drive with the Drivebase app

Access your product and service information in the cloud from anywhere

Access your drive's diagnostics data

Push notifications for critical product and service updates

Access information anywhere

Download the apps using the QR codes below or directly from the app stores

Drivetune for commissioning and managing drives

Drivebase for ensured reliability and reduced downtime on production sites

Technical data and how to select a drive

Type designation:

Product series
Types and construction
Ratings
Voltages
Options

To choose the right drive for your application, please refer to the rating tables on pages 12, 13, 16, 17, 19, 21, 24, 25, 26, 27, 28 and 29 or use ABB's DriveSize (page 48) dimensioning tool. The selected drive has a unique type designation, which identifies the drive by construction, power and voltage range. The options are added to the type designation with a "plus" code. Build up your own ordering code using the type designation key or contact your local ABB drives sales office and let them know your needs/requirements.

Mains connection		Environmental limits	
Voltage and power range	3-phase, U_{N2} = 208 to 240 V, +10/-15% (-01)	Ambient temperature

Single drive modules, ACS880-01 with option +P940 or +P944

Our all-compatible ACS880-01 single drives support easy and cost efficient cabinet installation with option +P940 or +P944. The optimized module design makes cabinet installation easy and minimizes the need for cabinet space, while providing all-compatible features in one compact drive module. The power range is from 0.55 to 250 kW and the voltage range is from 230 to 690 V. The enclosure class is IP20 as standard.

These single drive modules are customized to the precise needs of industries such as oil and gas, mining, metals, chemicals, cement, power plants, material handling, pulp and paper, sawmills and marine. They are designed to control a wide range of applications including cranes, extruders, winches, winders, conveyors, mixers, compressors, pumps and fans.

Optimized for cabinet assembly

All our modules (frame sizes R1 to R9) are built-on ABB's common drives architecture for easy commissioning and use. At the heart of the drive is direct torque control (DTC), ABB's premier motor control technology. To optimize the use of cabinet space, the ACS880-01 modules can be mounted side by side inside the cabinet. Because the drive module has built-in EMC filter, choke and braking chopper, design effort is reduced and installation is made easy. The extensive range of built-in and external options include EMC filters, encoders, resolvers, du/dt filters, sine filters, chokes and brake resistors, as well as application-specific software. Built-in safety features, such as safe torque off (STO), reduce the need for external safety components. Multiple drives can be daisy-chained for synchronized drive-to-drive communication. With the panelbus feature, several drive modules inside a cabinet can be accessed and operated using one common control panel. Our offering also covers an option for flange mounting with IP55 back side protection. In flange mounting the control electronics are separated from the cooling airflow for better thermal management.

ABB provides an extensive selection of support documentation for planning including dimension drawings in different formats, EPLAN P8 macros and line apparatus selection tool for selecting external components on the line side and motor side of the drive.

Main features

- Optimized for easy and cost efficient cabinet installation
- Enclosure class IP20
- Compact design for easy installation, commissioning and maintenance
- Side-by-side mounting
- Built-in EMC filter (as option), choke (as standard) and braking chopper (as option for frame sizes R5 to R9) will reduce design effort and makes installation easy
- Direct torque control (DTC) as standard, for high performance motor control
- Integrated safety including safe torque off (STO) as standard and the optional safety functions module, FSO-12 (TÜV Nord certified)
- Supports various motor types including synchronous reluctance motors
- Intuitive control panel with USB connection
- Removable memory unit for easy maintenance
- Drive composer PC tool for commissioning and configuration
- Primary control program - common software used throughout the ACS880 drive series
- Control unit supporting a wide range of fieldbuses, feedback devices and input/output options
- Coated boards as standard
- Controllable cooling fan
- Incoming air temperature measurement for protecting the drive from different temperature related failure mechanisms
- du/dt and sine filter option for motor protection

Flange mounted ACS880-01, frame size R8, IP20

ACS880-01, frame sizes R1, R8 and R5, IP20

Nominal ratings	
I_N	Rated current available continuously without overloadability at 40 °C.
P_N	Typical motor power in no-overload use.
$I_{\max}$	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
Light-overload use	
I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 min/5 min at 40 °C.
P_{Ld}	Typical motor power in light-overload use.
Heavy-duty use	
I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 min/5 min at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.
The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 55 °C) the derating is 1%/1 °C.

Single drive modules, ACS880-04 and ACS880-04F

Our ACS880-04 and flange mounted ACS880-04F single drive modules are optimized for easy and cost efficient cabinet assembly. With a compact and robust cabinet design, they save a lot of floor space and are easy to maintain and service. Being part of the all-compatible ACS880 industrial drives series, the single drive modules are easy to integrate into other systems and they provide great control performance with versatile drive features. This power intensive drive module is compatible with a wide range of industries including oil and gas, mining, metals, chemicals, cement, power plants, material handling, pulp and paper and woodworking. Applications range from cranes, extruders, conveyors, compressors to pumps and fans.

Easy and cost efficient cabinet assembly

The module is designed with all the necessary components for making engineering, cabling and cabinet assembly easier. The module comes as a bookshelf and flat variant. It has a pedestal with wheels and a ramp for pushing the module inside the cabinet and connecting it to the optional cable panel. For optimized cabinet usage, features include power input connections on the top of the module and power output on the bottom. The control unit can be either installed inside or outside of the module, enabling free location of input/output terminals.

The built-in features include direct torque control (DTC), ABB's premier motor control technology, chokes for harmonic reduction, safe torque off (STO) and drive-to-drive communication as standard. Additional built-in options include EMC filters, braking chopper and common mode filters, several inputs/outputs terminals, fieldbus connectivity, integrated safety including several safety functions and option slots for speed feedback. The drive comes with IP20 enclosure class as standard, reducing engineering time and cabinet assembly costs.

ABB provides an extensive selection of support documentation for planning including dimension drawings in different formats, EPLAN P8 macros and line apparatus selection tool for selecting external components on the line side and motor side of the drive.

Main features

- Enclosure class IP20 as standard, in ACS880-04F (flange mounted) the external part is IP55
- Power supply coming from the top part of the module and out from the lower part of the cabinet, enabling more optimal cabinet design
- Possibility for flat mounting enables cabinet assembly even into cabinets with limited depth
- Easy installation, commissioning and maintenance with pedestal on wheels, ramp and optional cable panel (+H381)
- Direct torque control (DTC) as standard, for high performance motor control
- Integrated safety including safe torque off (STO) as standard and the optional safety functions module (TÜV Nord certified)
- Supports various motor types including synchronous reluctance motors
- Intuitive control panel with USB connection
- Removable memory unit for easy maintenance
- Drive composer PC tool for commissioning and configuration
- Control unit with three option slots, that can be installed either inside the module or in different parts of the cabinet, supporting a wide range of fieldbuses, feedback devices and input/output options
- Coated boards as standard
- Built-in choke as standard for input harmonics reduction
- Built-in braking chopper (option)
- EMC filter option
- Power terminals are available as standard on the left side of the module. The power terminals can also be cabled on the right side of the module as option
- ACS880-04XT, frame sizes R10 or R11 single drive modules can be parallel connected for higher powers
- ACS880-04XT can be connected as 6-pulse or as 12-pulse

Single drive modules, ACS880-04, frame sizes R10 (with external control unit) and R11 (with internal control unit and control panel integrated in the module), bookshelf mounting

Single drive modules, ACS880-04 (flat mounting), and ACS880-04F (flange mounting)

Optional cable panel installed inside the cabinet. ACS880-04 is pushed into the cabinet using a ramp and pedestal on wheels.

High power single drive module packages, ACS880-04

nxDxT supply units and nxR8i inverter units

The ACS880-04 high power single drives module packages include the parallel connected R8i inverter module and D8T half controlled diode bridge with thyristor charging. The power range is from 630 to 2200 kW, and the voltage range is from 380 to 690 V.

These compact multidrive modules come as bookshelf variants. They have been optimized for assembly into customer's own cabinets. Installing and transporting them is easy, as they come equipped with wheels. Connecting the modules to the motor cables inside the cabinet is quick as the modules come with quick connectors as standard. The modules can also be quickly pulled out from a cabinet without any need for disconnecting the motor cables. This is done simply by disconnecting a couple of bolts. The R8i inverter module comes equipped with a removable fan pedestal, which makes motor cabling easy.

The control unit and the input/output connections can be located in the most optimal part inside the cabinet. The circuit boards in the modules are in a sealed compartment, keeping them clean and cool during operation. The cooling fans in the module are speed controlled as a standard, helping to lower the noise level of the module and making it more energy efficient. The fans also make the temperature for the semiconductors more stable.

Main features

- Optimized design for easy cabinet assembly (comes with wheels)
- Compact bookshelf design
- Easy access to power terminals
- Side-by-side mounting
- Direct torque control (DTC) as standard, for high precision motor control
- Long lifetime cooling fan and capacitors
- Built-in redundancy with parallel connected modules
- Extensive, programmable inputs/output with galvanically isolated inputs
- Integrated safety including safe torque off (STO) as standard and the optional safety functions module (TÜV Nord certified)
- Supports various motor types including synchronous reluctance motors
- Removable memory unit for easy maintenance
- Drive composer PC tool for commissioning and configuration
- Control unit BCU-X2 is used with all parallel connected modules, such as nxR8i and DxT. It has three option slots, and a slot for DDCS optical communication
- The control unit can be installed in different parts of the cabinet, and it supports a wide range of fieldbuses, feedback devices and input/output options
- Coated boards come as standard
- Speed controlled cooling fans, or DOL as an option for certain frames
- Large power terminals allowing the use of a wide range of cable sizes
- Complete cabinet design for Rittal TS8 cabinets

Nominal ratings	
I _N	Rated current available continuously without overloadability at 40 °C.
P _N	Typical motor power in no-overload use.
I _{max}	Maximum output current. Available for 10 seconds at start, then as long as allowed by drive temperature.
I _{max_start}	Maximum output current at start. When enabled, available for 2 seconds only at start every 7 seconds.
Light-overload use	
I _{Ld}	Continuous current allowing 110% I _{Ld} for 1 min/5 min at 40 °C.
P _{Ld}	Typical motor power in light-overload use.
Heavy-duty use	
I _{Hd}	Continuous current allowing 150% I _{Hd} for 1 min/5 min at 40 °C.
P _{Hd}	Typical motor power in heavy-duty use.
The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 50 °C ²⁾ or up to 55 °C ³⁾) the derating is 1%/1 °C.	
¹⁾ Without pedestal (+0H354) and without IP20 shrouds and full-size terminals (+0B051+0H371) height is 179 mm less and width 45 mm less. More information from HW manual.	
²⁾ ACS880-04 high power single drive package.

Regenerative single drive module package, ACS880-14

This single drive module package is a compact regenerative drive module solution. The package consists of R8i multidrive modules and a LCL line filter optimized for easy cabinet assembly. The ACS880-14 captures and utilizes energy which results in cost savings for the user.

With regenerative functionality, the braking energy of the motor is returned back to the drive and distributed forward to the supply network. This ensures that braking energy is not wasted as heat. In comparison with other braking methods, such as mechanical and resistor braking, the ACS880-14 brings much more energy savings. The module package is compatible with a broad range of industries including automotive, food and beverage, oil and gas, chemical, mining and metals. The drive is suitable for applications such as centrifuges, test benches conveyors, winches, elevators, pumps and fans.

High performance drives

The drive features direct torque control (DTC) as standard, enabling fast transition between motoring and generating mode in applications such as test benches and elevators. The drives active supply unit is able to boost output voltage, which guarantees full motor voltage even when the supply voltage is below nominal. The ACS880-14 reaches unity power factor.

Clear energy savings

Handling of waste heat may be a problem if the braking power is significant. The ACS880-14 does not need external braking devices, which makes drive installation simple as less need for cabinet space is required.

Simplified installation and connection

Installation of multidrive modules into cabinets is simplified with the use of mechanical and electrical accessories. These accessories are available giving full design to install the modules into Rittal TS8 cabinets. In addition, generic kits offer great help for installation of the modules into any other cabinet types that are available. Alternatively, ABB authorized and registered machine builders, system integrators and panel builders can manufacture their own accessory kits by accessing the online engineering support website which features detailed kit drawings. Cabinet assembly accessories help shorten engineering and assembly time as well as helping to reduce the risk of errors.

Main features

- Compact design for easy cabinet assembly and maintenance
- Optional air inlet and outlet kits available for enclosure classes IP20, IP42 and IP54
- LCL line filter
- Integrated safety including safe torque off (STO) as standard and the optional safety functions module (TÜV Nord certificate)
- Supports various motor types including synchronous reluctance motors
- Drive composer PC tool for commissioning and configuration
- Intuitive and easy to operate control panel with USB connection
- Device panel for optional switches and pilot lights
- Primary control program – common software used throughout the ACS880 drive series
- Control unit supporting a wide range of fieldbuses, feedback devices and input/output options
- Removable memory unit for easy maintenance
- Coated boards as standard
- Extensive, programmable digital and analog inputs and outputs
- Long lifetime capacitors
- Cooling fans with speed control or on-off control
- du/dt and common mode filter options for motor protection

Ratings, types and voltages

Ultra-low harmonic single drives module package, ACS880-34

This single drive module package creates less harmonics compared to drives that offer standard diode supply solutions. The package consists of R8i multidrive modules and a LCL line filter optimized for easy cabinet assembly. The ACS880-34 produces exceptionally low harmonic content in the drives input. This is achieved without external filters or multi-pulse transformers. By managing and controlling harmonics, the drive reaches unity power factor. The active supply unit in the drive is able to boost output voltage, which guarantees full motor voltage even when the supply voltage is below nominal.

The ACS880-34 is compatible with a broad range of industries including oil and gas, chemical, mining, water and wastewater, cement and metals. The drive is suitable for applications such as pumps and fans, extruders, conveyors and compressors.

Improved harmonic performance

When compared to multi-pulse transformer solutions, the ACS880-34 does not require a dedicated transformer. For this reason, the cabinet-built low harmonic drive is simpler in terms of cabling arrangements and requires less floor space. Harmonic performance is also better when compared with 12- and 18-pulse solutions, handling online imbalance or other shortcomings in the supply network. Passive or active external filtering devices are avoided with the ACS880-34, making the solution compact and simple.

Simplified installation and connection

Installation of multidrive modules into cabinets is simplified with the use of mechanical and electrical accessories. These accessories are available giving full design to install

the modules into Rittal TS8 cabinets. In addition, generic kits offer great help for installing the modules into any other cabinet types that are available. Alternatively, ABB authorized and registered machine builders, system integrators and panel builders can manufacture their own accessory kits by accessing the online engineering support website which features detailed kit drawings. Cabinet assembly accessories help shorten engineering and assembly time as well as helping to reduce the risk of errors.

Main features

- Compact design for easy cabinet assembly and maintenance
- Optional air inlet and outlet kits available for enclosure classes IP20, IP42 and IP54
- LCL line filter
- Optional main switch and fuses
- Integrated safety including safe torque off (STO) as standard and the optional safety functions module (TÜV Nord certificate)
- Supports various motor types including synchronous reluctance motors
- Drive composer PC tool for commissioning and configuration
- Intuitive and easy to operate control panel with USB connection
- Device panel for optional switches and pilot lights
- Primary control program – common software used throughout the ACS880 drive series
- Control unit supporting a wide range of fieldbuses, feedback devices and input/output options
- Removable memory unit for easy maintenance
- Coated boards as standard
- Extensive, programmable digital and analog inputs and outputs
- Long lifetime capacitors
- Cooling fans with speed control or on-off control
- du/dt and common mode filter options for motor protection

Multidrive modules, ACS880-X04

Our ACS880 multidrive modules are designed to be built into a customers' own cabinets by machine builders and system integrators. The power of the inverter modules is available up to 3200 kW. The diode supply unit (DSU) is available up to 5445 kVA. The IGBT supply unit (ISU) is available up to 3679 kVA. The regenerative rectifier unit (RRU) is available up to 4135 kVA. All supply units offer supply voltages from 380 to 690 V. Multidrive modules are used for building multidrive configurations. The modules are used in industries such as metals, oil and gas, mining, marine, offshore, material handling machines, pulp and paper, automotive, food and beverage, cement, power, water and wastewater. They control a wide range of applications such as cranes, profile and flat rolling, conveyors, winches, test benches, processing lines, paper machines, pumps and fans. The multidrive modules are built using ABB's common drives architecture and are available in several frame sizes.

Rectifiers, inverters, brake options, filters, inputs and outputs options, communication option, documentation and everything else required for a complete drive is available. The drive can control motors in either open loop or closed loop through its high precision motor control platform, direct torque control (DTC). Built-in safety features reduce the need for external safety components.

Main features

- Compact design for easy cabinet assembly and maintenance
- Diode bridge that is highly reliable with high power density
- IGBT supply modules for regenerative drive systems with low harmonic distortion
- Regenerative rectifier unit (RRU) enables higher powers of the same power module
- Integrated safety including safe torque off (STO) as standard with several safety functions as options
- Drive composer PC tool for commissioning and configuration
- Intuitive control panel with USB connection
- Primary control program - common software used throughout the ACS880 drive series
- Control unit ZCU for inverter modules (frame sizes R1i to R7i and diode supply modules DxD and IGBT supply modules R1i to R6i) comes with three option slots for extension option modules

- IGBT supply modules (frame size n×R8i), inverter modules (n×R8i), diode supply modules (n×DxT) and Regenerative rectifier unit (n×R8i) uses the BCU control unit that comes with integrated branching unit, power stage link data logger with detachable memory card, embedded Ethernet and three option slots with an additional slot for DDCS communication option
- Supports various motor types including synchronous reluctance motors
- Removable memory unit for easy maintenance
- Coated boards as standard
- Braking options
- Cabinet accessory kits
- Optional installation frames for mounting multidrive modules
- Detailed documentation for cabinet assembly

Simplified installation and connection

Installation of multidrive modules into cabinets is simplified with the use of mechanical and electrical accessories. These accessories are available giving full design to install the modules into Rittal TS8 cabinets. In addition, generic kits offer great help to install the modules into any other cabinet types that are available. Alternatively, ABB authorized and registered machine builders, system integrators and panel builders can manufacture their own accessory kits by accessing the online engineering support website which features detailed kit drawings. Cabinet assembly accessories help shorten engineering and assembly time as well as reduce the risk of errors.

Using our cabinet assembly accessories and part drawings enables easy and efficient installation, making sourcing the mechanical components more flexible. Other benefits that reduce time required for mechanical engineering include dimensional and assembly drawings with accessories drawings available as 3D models, EPLAN electric P8 macros, module circuit diagrams and installation example videos and animations for cabinets. Training material for cabinet assembly of drives is also available.

Multidrive modules, ACS880-X04

The modules have a side-by-side mounting on the assembly plate situated in the cabinet, making module installation faster and easier. Modules with bigger frame sizes are equipped with wheels so they can easily be moved in or out of the cabinet for maintenance purposes. This concept also allows pre-installation of the power cables inside the empty cabinet. Besides the compact design, the new ACS880 inverter and rectifier units include an extensive selection of options.

The multidrive construction simplifies the total installation and provides many advantages such as:

- Savings in cabling, installation and maintenance costs
- Space savings
- Reduced component count and increased reliability
- Reduced line currents and simpler braking arrangements
- Energy circulation over the common DC busbar, which can be used for motor-to-motor braking without the need for a braking chopper or regenerative supply unit
- Optimized and simple cabinet

Inverter units (INU)

Inverter units come in 8 different frame sizes. Frame sizes R1i to n×R8i start from 1.5 to 3200 kW. The voltage ranges from 380 to 690 V. Inverter units have built-in capacitors for smoothing the voltage of the DC busbars. The electrical connection to the common DC busbar is fuse protected. An optional switch can be selected to disconnect the whole drive unit from the DC bus. Each inverter unit comes with safe torque off (STO) as standard and has a control unit (ZCU/BCU) which has slots to place different option adapters, such as input/output extension modules, speed feedback modules and fieldbus adapter modules.

Diode supply units (DSU)

A diode supply unit is used in non-regenerative drive systems to convert three-phase AC voltage to DC voltage. Multidrives have two different diode supply unit types. One of these is a diode supply unit (D6D to D8D) for power range 60 to 850 kVA that has no charging circuit. The charging is built into the drive units (R1i to R7i). This diode supply unit is controlled by the ZCU control unit.

The other one is a diode supply unit (D7T and D8T) for power range 340 to 5445 kVA, built with 1 to 6 parallel units. This half controlled diode supply unit has thyristor charging, BCU control unit and 6-pulse and 12-pulse versions available.

Frame sizes R1i to R8i

Frame sizes D6D to D8D and D8T

IGBT supply units (ISU)

IGBT supply units are used in regenerative drives to convert three-phase AC voltage to DC voltage. These units are available from R1i to R4i, R6i and n×R8i frame size with LCL line filter in a power range from 5.5 to 6131 kVA. With regard to power control, it gives the same firm but gentle performance as direct torque control (DTC) gives in motor control. The IGBT module is hardware compatible with drive modules and it can operate in both motoring and generating modes.

The DC voltage is constant and the line current is sinusoidal. The control also provides a near unity power factor. The module can also boost DC voltages eg, when line voltage is low. Harmonic content remains extremely low due to DTC control and LCL line filtering.

Regenerative rectifier unit (RRU)

This supply unit is used in regenerative drive systems to convert three-phase AC voltage to DC voltage. The RRU is made of n×R8i inverter units and L filters. The IGBTs' are switched conducting only once during each network voltage cycle. This reduces switching losses and enables higher powers of the same power module. Operation of RRU is also reliable during supply network voltage variations.

Brake unit

Brake unit handles the energy generated by decelerating motors such as emergency stopping. During resistor braking, whenever the voltage in the intermediate circuit of a drive exceeds a certain limit, a braking chopper connects the circuit to a braking resistor.

Offering includes 1-phase brake unit and 3-phase dynamic brake unit (DBU) which utilizes R8i modules.

DC-DC converter (DDC)

DC-DC converter transfers energy from a common DC link of an multidrives into an external energy storage. From there it discharges energy back to the DC link. Energy storages can be batteries or super capacitors. Typical applications can be in marine (heave and peak load compensation) and automotive (battery simulators in test benches and electric car charging systems) industries.

Ratings, types and voltages

Inverter modules

With module covers and without strain relief clamps (R1i to R4i)

Nominal ratings

I_N	Rated current available continuously without overloadability at 40 °C.
S_N	Nominal apparent power.
P_N	Typical motor power in no-overload use.
I_{max}	Maximum output current. Available for 10 seconds at start, otherwise as long as allowed by drive temperature.

Light-overload use

I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 min/5 min at 40 °C.
P_{Ld}	Typical motor power in light-overload use.

Heavy-duty use

I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 min/5 min at 40 °C.
P_{Hd}	Typical motor power in heavy-duty use.

The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 50 °C) the derating is 1%/1 °C.

With module covers and without strain relief clamps (R1i to R4i)

Nominal ratings

I_N	Rated current available continuously without overloadability at 40 °C.
S_N	Nominal apparent power.
P_N	Power in no-overload use.
I_{max}	Maximum output current. Available for 10 seconds at start, otherwise as long as allowed by drive temperature.

Light-overload use

I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 min/5 min at 40 °C.
P_{Ld}	Power in light-overload use.

Heavy-duty use

I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 min/5 min at 40 °C.
P_{Hd}	Power in heavy-duty use.

The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 50 °C) the derating is 1%/1 °C.

With module covers (R5i)

Nominal ratings

I_N	Rated current available continuously without overloadability at 40 °C.
S_N	Nominal apparent power.
P_N	Power in no-overload use.
I_{max}	Maximum output current. Available for 10 seconds at start, otherwise as long as allowed by drive temperature.

Light-overload use

I_{Ld}	Continuous current allowing 110% I_{Ld} for 1 min/5 min at 40 °C.
P_{Ld}	Power in light-overload use.

Heavy-duty use

I_{Hd}	Continuous current allowing 150% I_{Hd} for 1 min/5 min at 40 °C.
P_{Hd}	Power in heavy-duty use.

The ratings apply at 40 °C ambient temperature. At higher temperatures (up to 50 °C) the derating is 1%/1 °C.

Standard interface and extensions for comprehensive connectivity

The ACS880 drive modules offer a wide range of standard interfaces. In addition the drive has three option slots that can be used for extensions including fieldbus adapter modules,

input/output extension modules, feedback modules and a safety functions module.

Control connections	Description
2 analog inputs (XAI)	Current input: -20 to 20 mA, R_{in} : 100 ohm Voltage input: -10 to 10 V, R_{in} > 200 kohm Resolution: 11 bit + sign bit
2 analog outputs (XAO)	0 to 20 mA, R_{load} < 500 ohm Frequency range: 0 to 300 Hz Resolution: 11 bit + sign bit
6 digital inputs (XDI)	Input type: NPN/PNP (DI1 to DI5), NPN (DI6) DI6 can alternatively be used as an input for a PTC thermistor.
Digital input interlock (DIIL)	Input type: NPN/PNP
2 digital inputs/outputs (XDIO)	As input: 24 V logic levels: "0" < 5 V, "1" > 15 V R_{in} : 2.0 kohm Filtering: 0.25 ms As output: Total output current from 24 V DC is limited to 200 mA Can be set as pulse train input and output
3 relay outputs (XRO1, XRO2, XRO3)	250 V AC/30 V DC, 2 A
Safe torque off (XSTO)	For the drive to start, both connections must be closed
Drive-to-drive link (XD2D)	Physical layer: EIA-485
Built-in Modbus	EIA-4z85
Assistant control panel/PC tool connection	Connector: RJ-45

Control unit ZCU

Example of a typical drive modules input/output connection diagram. Variations may be possible (please see HW manual for more information).

Standard software for scalable control and functionality

The same software, the primary control program, is used across the whole ACS880 series. Features such as built-in pre programmed application macros save time during configuration and drive commissioning. The application macros help set parameters for various functions including:

- Basic setup for input/output control and fieldbus control
- Hand/auto control for local and remote operation
- PID control for closed loop processes
- Sequential control for repetitive cycles
- Torque control
- Four user defined sets, for own parameter settings

Direct torque control (DTC)

The drives are equipped with direct torque control (DTC), ABB's signature motor control platform which supports motors such as induction motors, permanent magnet motors, servo motors and the new synchronous reluctance motor. It can also be used with sine filters. DTC helps control the motor from standstill to maximum torque and speed without the necessity of position sensors or encoders. DTC allows high overloadability, gives high starting torque and reduces stress on mechanics.

Energy efficiency information

The drives come with built-in energy efficiency information that helps the user fine-tune processes to ensure optimum energy use. The energy optimizer mode ensures the maximum torque per ampere, reducing energy drawn from the supply. The load profile feature collects drive values with three loggers: two amplitude loggers and one peak value logger. Calculators provide essential energy efficiency information: used and saved electrical energy, CO₂ reduction and money saved.

Additional software features include:

- Access levels
- Adaptive programming
- Automatic reset
- Automatic start
- Constant speeds
- Critical speeds and frequencies
- DC hold
- DC magnetizing
- Diagnostics
- Drive-to-drive link for master-follower control
- Flux braking
- Jogging
- Maintenance timer and counters
- Mechanical brake control
- Motor potentiometer
- Output phase order selection, switches rotation direction of the motor
- Oscillation damping
- Power loss ride-through
- Process PID control with trim function
- Programmable and pre-programmed protection functions
- Programmable inputs and outputs
- Scalar control with IR compensation
- Speed controller with auto tuning
- Startup assistants
- User adjustable load supervision/limitation
- User selectable acceleration and deceleration ramps
- Variable slope

Removable memory unit

The removable memory unit stores the standard software that includes user settings, parameter settings and motor data. Situated on the control unit, the memory unit can easily be removed for maintenance, update or replacement purposes. This common type of memory unit is used throughout the ACS880 series.

Application control programs

Our application control programs are developed by working closely with our customers over many years. This results in application programs that include the lessons learned from many customers, and that are designed to give you the flexibility to adapt the programs to your specific needs. These programs enhance application usability and lower energy consumption. They increase safe operation of the applications and reduce the need for a PLC. Other benefits include protection of machinery and optimization of application productivity. The programs also optimize time usage and lower operational costs.

The ACS880 application control programs come with adaptive programming features. This makes fine tuning of the ready-made application control program functionalities easy. Additionally, we understand that you may need to use different configurations in your process. That's why each of our control programs comes with the ability to configure up to four different configurations, or "user sets." The ACS880 drives offer integrated safety with safe torque off (STO) functionality as standard. The optional safety functions module comes with several safety functions including safe brake control (SBC).

Control program for cranes

This control program is dedicated for industrial, harbor, tower and marine deck cranes. It is possible to control crane movements in hoist and trolley and travel motions using the same software. The control program comes with integrated mechanical brake control to assure safe opening and closing of the mechanical disc or drum brakes. Standalone and master-follower functionality is supported along with synchro control of multimotors. The synchro control for common operation of the load functionality makes it possible to lift and lower loads, such as containers, in a smooth and balanced way during transportation. The load speed control function maximizes the hoist speed for the given load and ensures that there is sufficient motor torque in the field weakening area. This minimizes operation time and optimizes crane capacity. Fieldbus and conventional I/O control is supported. The antisway function is designed for indoor cranes to prevent unnecessary swaying of the load.

Control program for marine winches

The control program is designed for electrically driven deck machinery winches, such as anchor and mooring winches on different kinds of vessels. Anchoring and mooring on heavy vessels often involves low-speed, high-torque situations. Based on the application expertise gained with our customers over the years, we have developed drives that overcome the winching challenges and enable precise, dependable and smooth operation of new winch installations and retrofits of old winches.

The control program includes built-in anchor, hand-mooring and auto-mooring functions and parameter sets. The hand-mooring enables high-speed mode to quickly reel ropes in or out to achieve pre-tension in the ropes before switching over to auto-mooring. The operator can control operations from one of the four available control stands or using a wireless radio controller. All common control stand interfaces are supported.

The combination of direct torque control (DTC) and a winch control program eliminates the need for motor shaft encoders and gearbox load cell sensors, while the advanced mechanical brake control for the motor brake reduces stress on brake and gearbox.

Control program for winder

This control program makes sure that the unwinding and winding of a roll of web material, such as textile, plastic and paper is performed optimally. The control program observes the diameter of rolls and tension of the web material and makes sure that the drives controlling different parts of the winder are in sync. Based on the feedback from the dancer or tension measurement of the web, the speed or torque of the drive is adjusted appropriately. The result is a straightforward, cost-effective solution in web handling.

Application control programs

Control program for artificial oil lifting

This control program increases oil production for PCP (progressive cavity pumps), ESP (electro submersible pumps) or rod pumps. The program does not require any feedback encoder to work, which saves costs and increases reliability. The software also reduces stress on the complete pump system when optimizing fluid production. Backspin functionality is especially suitable for PCP and ESP pumps, which minimizes failure and makes oil pumping safe. Various startup ramp functions are also available. The sensorless control function (pump off control) helps to optimize oil pumping productivity by keeping the energy usage on a predetermined level. The efficiency of PCP pumps is significantly increased when using ACS880 drives together with SynRM motors.

Control program for centrifuge/decanter

This control program is designed to perform practical programmable sequences for conventional centrifuges. The program optimizes the separation of solids from the liquids in centrifuges, separators or decanter centrifuges. The speed difference of the decanter bowl and the scroll in the decanter centrifuge is controlled by the drive-to-drive functionality available in ACS880 drives.

Control program for cooling tower

This program is used in ACS880 drives to control high-torque and slow-speed synchronous RPM-AC permanent magnet motors in cooling tower applications. The control program is the basis for a drive-motor package where the cooling tower direct drive motor (CTDD) and the ACS880 drive is installed directly to the fans without any need for gearboxes, drive shafts or couplings. This provides high torque that is required for cooling tower applications without additional drivetrain components. The result is energy savings, reduced maintenance risk and costs, and direct-on-load startup current peaks. The control program for cooling tower is easy to commission and use. The ACS880 drives offer a streamlined parameter set that is focused on the typical cooling tower direct drive configurations where only necessary parameters are visible. Other cooling tower features in the drive include trickle current for keeping the motor warm and dry, a de-icing function to prevent ice build-up on the fan

blades and an anti-windmill function to prevent rotation of the fan during standby.

Spinning and traverse control program for ring frame textile machines

This control program offers precise control for over yarn production. It is designed to run spinning bobbins in ring frame textile machines. In order to achieve the best possible doffing, preset speed values based on elapsed time or length are given.

The traverse functionality is used in textile machines to guide the yarn into a yarn package.

Control program for tunnel fans in emergency situations

The emergency features of the override control program activate in case of an emergency, such as a fire in the tunnel. In this mode, most protections that would normally stop the drive are disabled. Ordinary start, stop and speed or frequency references are also disabled. Only the override reference is active.

Control program for chemical industry process control

The requirements imposed on PROFIBUS-DP communication by NAMUR NE 122 in the chemical industry can easily be met with the new PROFIBUS NAMUR control program, which is available for the complete ACS880 Industrial drive family. The PROFIBUS NAMUR control program allows communication between the drive and the process control system using the VIK-NAMUR profile to be easily and reliably set up with minimum effort.

In addition to PROFIBUS-DP communication according to NE122, ACS880 drives offer other features, such as support for NAMUR NE37 signals. ACS880 drives also conform to NAMUR NE38, as the DTC can operate with a sine filter. In addition, the ACS880 has integrated safety functions such as Safe Torque Off (STO), Safely-Limited Speed (SLS), an ATEX-certified safe disconnection function, and an integrated ATEX-certified thermistor protection module certified by TÜV Nord and VTT expert services Ltd. These features combined with ABB Ex drive and motor package certifications offer an excellent solution for the chemical industry.

Designed to control virtually any type of AC motor

Our ACS880 drives control virtually any type of AC motor including induction, permanent magnet, servo and synchronous reluctance motors. Motor control is optimized with direct torque control (DTC), ABB's premium motor control, built-in as a standard feature in our ACS880 drives. Our robust industrial drives ensure an energy efficient and reliable motor controller with significant cost savings for the user.

Direct torque control (DTC) for optimal control of motors

To ensure optimal control of an motor, our ACS880 drives offer direct torque control (DTC) as a built-in standard feature. In majority of applications, even with sine filters, the DTC reduces the need for an expensive speed feedback encoder. Direct torque control provides fast reaction to load changes in the motor shaft as well as reference changes on speed or torque made by the user. It makes the motor run optimally which lowers energy consumption and wear of the application.

ACS880 and induction motors form a reliable combination

Induction motors are used throughout the industry in several types of industry applications which demand robust and high enclosure motor and drive solutions. The ACS880 drives fit perfectly together with this type of motor, used in a wide range of industrial environments. The drives fit into environments that require high degree of protection and offer narrow facilities. ACS880 drives come with DTC as standard, which ensures high speed accuracy.

Because they are ATEX certified, our drives can be combined with ABB motors for explosive atmospheres.

ACS880 and permanent magnet motors for smooth operation

Permanent magnet technology is often used for improved motor characteristics such as energy efficiency, compactness and control performance. This technology is particularly well suited for low speed control industry applications, as they eliminate the need to use gear boxes. Actual characteristics between different permanent magnet motors can vary considerably. ACS880 drives with DTC can control ABB and most other permanent magnet motors without speed or rotor position sensors.

ACS880 and IE4 synchronous reluctance motors for a package with high efficiency

Combining the ACS880's control technology with our synchronous reluctance (SynRM) motors provides an IE4 motor and drive package that gives you great energy savings benefits. The key is in the rotor design. The synchronous reluctance rotor replaces the traditional induction rotor and requires no permanent magnets. ABB has tested our SynRM motor and drive packages and produced manufacturer's statements providing verified system (drive and motor) efficiency.

Intuitive human-machine interface

The assistant control panel features intuitive use and easy navigation. High resolution display enables visual guidance. The panel saves on commissioning and learning time by means of different assistants, making the drive simple to set up and use. Standard delivery includes Bluetooth panel which enables connection with Drivetune mobile app.

It is possible to organize parameters in different ways and store essential parameters for different configurations for any specialized application needed. The menus and messages can be customized for specific terminology so that each application can be set up and configured to its optimum performance. This makes the drive easier to use with information that is familiar to users. With the panel's text editor, users can also add information, customize text and label the drive. Powerful backup and restore functions are supported as well as different language versions. The help key provides context sensitive guidance. Faults or warnings can be resolved quickly since the help key provides troubleshooting instructions.

One control panel can be connected to several drives simultaneously using the panel network feature. The user can also select the drive to operate in the panel network. The PC tool can be easily connected to the drive through the USB connector on the control panel. There is also the assistant control panel mounting platform, DPMP-01 (IP54) and DPMP-02 (IP65) kit are available for cabinet door flush mounting.

PC tool for easy startup and maintenance

The Drive composer PC tool offers fast and harmonized setup, commissioning and monitoring for the whole drives portfolio. The free version of the tool provides startup and maintenance capabilities, while the professional version provides additional features such as custom parameter windows, control diagrams of the drive's configuration and safety settings.

The Drive composer tool is connected to the drive using an Ethernet connection or through the USB connection on the assistant control panel. Ethernet connection can use a shared network with Ethernet-based fieldbuses, thus reducing the amount of cabling. All drive information such as parameter loggers, faults, backups and event lists are gathered into a support diagnostics file with a single mouse click. This provides faster fault tracking, shortens downtime and minimizes operational and maintenance costs.

Drive composer pro

Drive composer pro provides basic functionality, including parameter settings, downloading and uploading files and search parameters. Advanced features such as graphical

control diagrams and various displays are also available. The control diagrams save users from browsing long lists of parameters and help to set the drive's logic quickly and easily. The tool has fast monitoring capabilities of multiple signals from several drives in a PC tool network. Full backup and restore functions are also included. Safety settings can be configured with Drive composer pro.

Integrated safety simplifies configuration

Integrated safety reduces the need for external safety components, simplifying configuration and reducing installation space. The safety functionality is a built-in feature of the ACS880, with safe torque off (STO) as standard. Additional safety functions can be commissioned with the optional and compact safety functions module. ACS880 drives offer encoderless safety. The drives' functional safety is designed in accordance with EN/IEC 61800-5-2 and complies with the requirements of the European Union Machinery Directive 2006/42/EC.

Safe torque off as standard

Safe torque off (STO) is used to prevent unexpected startup and in stopping-related functions, enabling safe machine maintenance and operation. With safe torque off activated, the drive will not provide a rotational field. This prevents the motor from generating torque on the shaft. This function corresponds to an uncontrolled stop in accordance with stop category 0 of EN 60204-1.

The safety functions modules

The easy to connect and configure safety functions module (FSO-12 and -21) offers a wide range of safety functions and a self diagnostic function that meets current safety requirements and standards, all in one compact module. Compared to using external safety components, the safety functions module comes with the supported functions seamlessly integrated with the drive functionality, reducing the implementation of safety function connections and configuration. Installation of the module results in less need for cabling and provides a cost-effective solution.

Commissioning and configuration of the safety functions module is done with the Drive composer pro PC tool. Larger safety systems can be built using PROFIsafe over Profinet connection between a safety PLC (such as AC500-S) and the ACS880 drive. The connection is achieved using the FENA-21 fieldbus adapter module and the safety functions module.

The safety functions module can also be ordered as a spare part kit and installed afterwards to the drive. The kit includes most common assembly accessories for ACS880 drives.

The module supports the following safety functions (which achieve up to SIL 3 or PL e (Cat. 3) safety level:

- **Safe stop 1 (SS1)** brings the machine to a stop (STO) using a monitored deceleration ramp. It is typically used in applications where the machinery motion needs to be brought to a stop (stop category 1) in a controlled way before switching over to the no-torque state.
- **Safe stop emergency (SSE)** can be configured to, upon request, either activate STO instantly (category 0 stop), or first initiate motor deceleration and then, once the motor has stopped, activate the STO (category 1 stop).
- **Safe brake control (SBC)** provides a safe output for controlling the motor's external (mechanical) brakes, together with STO.
- **Safely-limited speed (SLS)** ensures that the specified speed limit of the motor is not exceeded. This allows machine interaction to be performed at slow speed without stopping the drive. The safety function module comes with four individual SLS settings for speed monitoring. The safety functions module also provides a variable SLS function with PROFIsafe connection. This allows the user to change the speed limit of the SLS on the fly through a safety fieldbus communication.
- **Safe maximum speed (SMS)** monitors that the speed of the motor does not exceed the configured speed limit.
- **Prevention of unexpected startup (POUS)** ensures that the machine remains stopped when people are in a danger area.
- **Safe direction (SDI)** ensures that rotation is allowed only to the selected direction. Available only with FSO-21 and FSE-31.
- **Safe speed monitor (SSM)** provides information that speed is within the configured limits. Available only with FSO-21

Safe temperature monitoring can be done by using FPTC thermistor protection modules. These modules have SIL 2 or PL e safety level.

The safety functions module enables safety functions without an encoder. If the application requires a safe encoder feedback it can be established with the safety certified pulse encoder interface module FSE-31. The module provides safe encoder data to the safety functions module and can simultaneously be used as a feedback device for the drive.

Drive application programming based on IEC standard 61131-3

Automation Builder, ABB's new software suite for automation engineering, makes programming of industry devices such as drives, PLC's, robots and human machine interfaces (HMI) easy using one integrated engineering suite. The Automation Builder is used both for engineering individual industry devices and for putting together entire automation projects. It is based on a widely used software environment that fulfills many different requirements of industrial automation projects, according to the IEC standard 61131-3. As a single tool, the Automation Builder reduces time typically needed for system configuration and programming. It also reduces the need for installing and maintaining separate programs simultaneously. Automation Builder enables the possibility to do online diagnostic checking of multiple tasks performed by different industrial devices such as ACS880 drives.

Drive application programming

Automation Builder makes it possible for system integrators and machine builders to integrate their desired functionality and know-how directly into ACS880 drives. This is possible as ACS880 drives come with programming capability embedded inside the drive. Designing an application program in the drive makes the end user application run more efficiently, even without a separate programmable controller. It also brings higher end-product quality and requires less need for installation space and wiring.

Automation Builder lets you extend the standard functionality of parameter functions for ACS880 drives. This makes the ACS880 drives very flexible to meet exact requirements set for end user applications. The library management functionality in Automation Builder shortens engineering time as reuse of existing program code is possible. Additional features include the ability to select and use one of five different programming languages, effective program debugging and user password protection.

Integrated engineering suite for operating several industry components together

Using the Drive manager tool embedded in Automation Builder together with ABB's AC500 PLC gives the user online connection to all drives in a fieldbus network. This speeds up commissioning and makes diagnostic of the entire automation system easy. Automation Builder saves all the configuration data of industry devices, including drive parameter settings, and program code to the same project archive. This makes engineering work more consistent and manageable.

Drive application programmability

Flexible connectivity to automation networks

Our fieldbus adapter modules enable communication between drives, systems, devices and software. Our industrial drives are compatible with a wide range of fieldbus protocols.

The plug-in fieldbus adapter module can easily be mounted inside the drive. Other benefits include reduced wiring costs when compared with traditional input/output connections. Fieldbus systems are also less complex than conventional systems, resulting in less overall maintenance.

Multiple fieldbus connections for flexible control

ACS880 supports two fieldbus connections simultaneously. The user has flexibility of choice for control modes, and the possibility for redundant fieldbus adapters using the same protocol.

Redundant fieldbus communication

ACS880 supports Ethernet ring topology providing high network availability. Also switch over between physical networks is possible.

Drive monitoring

A set of drive parameters and/or actual signals, such as torque, speed, current, etc., can be selected for cyclic data transfer, providing fast data access.

Drive diagnostics

Accurate and reliable diagnostic information can be obtained through the alarm, limit and fault words.

Drive parameter handling

The Ethernet fieldbus adapter module allows users to build an Ethernet network for drive monitoring and diagnostic and parameter handling purposes.

Cabling

Substituting the large amount of conventional drive control cabling and wiring with a single cable reduces costs and increases system reliability and flexibility.

Design

The use of fieldbus control reduces engineering time at installation due to the modular structure of the hardware and software and the simplicity of the connections to the drives.

Commissioning and assembly

The modular machine configuration allows pre-commissioning of single machine sections and provides easy and fast assembly of the complete installation.

Universal communication with ABB fieldbus adapters

The ACS880 supports the following fieldbus protocols:

Fieldbus adapter modules

Option	Option code	Fieldbus protocol
FPBA-01	+K454	PROFIBUS DP, DPV0/DPV1
FCAN-01	+K457	CANopen®
FDNA-01	+K451	DeviceNet™
FENA-11	+K473	1 port EtherNet/IP™, Modbus TCP, PROFINET IO, PROIsafe ¹⁾
FENA-21	+K475	2 port EtherNet/IP™, Modbus TCP, PROFINET IO, PROIsafe ¹⁾
FECA-01	+K469	EtherCAT®
FSCA-01	+K458	Modbus RTU
FEPL-02	+K470	POWERLINK
FCNA-01	+K462	ControlNet™

¹⁾ For the PROIsafe to work PROFINET fieldbus adapter module (FENA-21) and the safety functions module (FSO-12/-21) are required.

Input/output extension modules for increased connectivity

Standard input and output can be extended by using optional analog and digital input/output extension modules. The modules are easily installed in the extension slots located on the control unit.

Analog and digital input/output extension modules

Option	Option code	Connections
FIO-01	+L501	4×DI/O, 2×RO
FIO-11	+L500	3×AI (mA/V), 1×AO (mA), 2×DI/O
FAIO-01	+L525	2×AI (mA/V), 2×AO (mA)

Speed feedback interfaces for precise process control

ACS880 drives can be connected to various feedback devices, such as HTL pulse encoder, TTL pulse encoder, absolute encoder and resolver. The optional feedback module is installed in the option slot on the drive. It is possible to use two feedback modules at the same time, either of the same type or different type.

Feedback interface modules

Option	Option code	Connections
FEN-01	+L517	2 inputs (TTL pulse encoder), 1 output
FEN-11	+L518	2 inputs (SinCos absolute, TTL pulse encoder), 1 output
FEN-21	+L516	2 inputs (Resolver, TTL pulse encoder), 1 output
FEN-31	+L502	1 input (HTL pulse encoder), 1 output

I/O option extension adapter

For additional I/O option slots the FEA-03 is suitable for this use. An analog and digital input/output extension and speed feedback interface can be installed on the FEA-03. Two extension modules can be installed on each I/O extension slot. The connection to the control unit is via a fiber optic link and the adapter can be mounted on a DIN rail (35 x 7.5 mm).

I/O extension adapter

Option	Option code	Connections
FEA-03	+L515	2×F-type option extension slots

DDCS communication option modules

The FDCO-0X (used in the ZCU control unit) and RDCO-0X (used in the BCU control unit) optical DDCS communication options are add-on modules on the ACS880 industrial drives control board. The modules include connectors for two fiber optic DDCS channels. The FDCO-0X modules make it possible to perform master-follower and AC800 M communication.

Option	Option code	Connections
FDCO-01	+L503	Optical DDCS (10 Mbd/10 Mbd)
FDCO-02	+L508	Optical DDCS (5 Mbd/10 Mbd)
RDCO-04	+L509	Optical DDCS (10 Mbd/10 Mbd/10 Mbd/10 Mbd)

Remote monitoring access worldwide

The remote monitoring tool, NETA-21, gives easy access to the drive via the Internet or local Ethernet network. NETA-21 comes with a built-in web server. Being compatible with standard web browsers, it ensures easy access to a web-based user interface. Through the interface the user can configure drive parameters, monitor drive log data, and follow up load levels, run time, energy consumption, I/O data and bearing temperature of the motor connected to the drive.

The user can access the remote monitoring tool web page using 3G modem from anywhere with a standard PC, tablet or a mobile phone. The remote monitoring tool helps to reduce cost when personnel are able to monitor or perform maintenance for unmanned or manned applications in a range of industries. It is also very useful when more than one user wants to access the drive from several locations.

Enhanced monitoring functions

The remote monitoring tool supports process and drive data logging. Values of process variables or drives actual

values can be logged to NETA-21's SD memory card which is situated in the remote monitoring tool or sent forward to a centralized database. NETA-21 does not need an external database as the remote monitoring tool is able to store valuable data of the drive during its entire lifetime.

Unmanned monitoring of processes or devices is ensured by the built-in alarm functions that notify maintenance personnel if a safety level is reached. Alarm history with true time stamps are stored internally to the memory card as well as technical data, which is provided by the drive for troubleshooting purposes. True time stamps are also used with drives that do not have a real time clock as standard for ensuring events of all connected drives.

NETA-21

EMC – electromagnetic compatibility

EMC standards

The EMC product standard (EN 61800-3 (2004)) covers the specific EMC requirements stated for drives (tested with motor and cable) within the EU. EMC standards such as EN 55011 or EN 61000-6-3/4 are applicable to industrial and domestic equipment and systems including components inside the drive. Drive units complying with the requirements of EN 61800-3 are compliant with comparable categories in EN 55011 and EN 61000-6-3/4, but not necessarily vice versa. EN 55011 and EN 61000-6-3/4 do not specify cable length or require a motor to be connected as a load. The emission limits are comparable to EMC standards according to the table below.

1st environment versus 2nd environment

1st environment includes domestic premises. It also includes establishments directly connected without an intermediate transformer to a low voltage power supply network that supplies buildings used for domestic purposes.

2nd environment includes all establishments other than those directly connected to a low voltage power supply network that supplies buildings used for domestic purposes.

EMC standards

EMC according to EN 61800-3 (2004) product standard	EN 61800-3 product standard	EN 55011, product family standard for industrial, scientific and medical (ISM) equipment	EN 61000-6-4, generic emission standard for industrial environments	EN 61000-6-3, generic emission standard for residential, commercial and light-industrial environment
1 st environment, restricted distribution	Category C2	Group 1, Class A	Applicable	Not applicable
2 nd environment, unrestricted distribution	Category C3	Group 2, Class A	Not applicable	Not applicable
2 nd environment, restricted distribution	Category C4	Not applicable	Not applicable	Not applicable

Selecting an EMC filter

The following table gives the correct filter selection.

Type	Voltage	Frame sizes	1 st environment, restricted distribution, C2, grounded network (TN) Option code	2 nd environment, C3, grounded network (TN) Option code	2 nd environment, C3, ungrounded network (IT) Option code	2 nd environment, C3, grounded/ ungrounded network (TN/IT) Option code
ACS880-01	380 to 500 V	R1 to R9	+E202	+E200	+E201 (R6 to R9 frame size)	–
ACS880-01	690 V	R5 to R9	–	+E200	+E201 (R7 to R9 frame size)	–

ACS880-204	380 to 690 V	R1i-R4i, R6i, nxR8i	Not for 690V. Only for R6i, 1xR8i ²⁾	–	–	As standard ¹⁾
ACS880-304	380 to 690 V	DxD, nxDxT	Not for 690V. Only for 1xR8T ²⁾	–	–	As standard ¹⁾

¹⁾ For Category C3 no optional equipment is needed, but the drive must be installed according to the instructions given in the manuals.

²⁾ For Category C2 optional equipment is needed, and the drive must be installed according to the instructions given in the manuals.

Sine filters, ACS880-01

Together with a sine filter, ACS880 drives offer smooth motor operation in both DTC and scalar modes. The sine filter suppresses high frequency components of the motors output voltage, creating almost a sinusoidal voltage wave form for the motor. The filter offers optimized LC design that takes into account switching frequency, voltage drop and filtering characteristics.

The ACS880 inverter and sine filter solution can be used together with a variety of requirements for products and components:

- For motors which don't have adequate insulation for the drives duty
- Where the total motor cable length is long as a result of a number of parallel motors
- For step-up applications eg where medium voltage motor needs to be driven
- For submersible pumps with long motor cables eg in the oil industry
- When the motor noise needs to be reduced
- When there are industry specific requirements for peak voltage level and voltage rise time

Nominal ratings

I_N Rated current of the drive-filter combination available continuously without overload at 40 °C.

Typical ratings

P_N Typical motor power

Notes:

¹⁾ Please note that sine filters cause voltage drop thus reducing the available shaft power from the motor.

²⁾ Noise level is a combined value for the drive and the filter. Heat dissipation is a value for the filter.

For further information please contact your local ABB.

For step-up applications eg, where medium voltage motor needs to be driven

Brake options, ACS880-01

Brake chopper

The brake chopper is built-in as standard for the ACS880-01 frame sizes R1 to R4. For other ACS880-01 frames, a brake chopper is a selectable internal option. The air-cooled brake chopper for other single and multidrive module unit includes an NBRA brake chopper module or two parallel-connected NBRA brake chopper modules. The brake chopper handles the energy generated by a decelerating motor. The chopper connects the brake resistor to the intermediate DC circuit whenever the voltage in the circuit exceeds the limit defined by the control program. Energy consumption by the resistor losses lowers the voltage until the resistor can be disconnected.

Brake resistor

The brake resistors (JBR, SACE, SAFUR) are separately available for ACS880 drive modules. Resistors other than the standard option resistors may be used, provided that the specified resistance value is not decreased and that the heat dissipation capacity of the resistor is sufficient for the drive application.

NBRA659 brake chopper

ACS880-01 brakes

$U_N = 230 \text{ V}$ (range 208 to 240 V)

Braking power		Brake resistor(s)				Type designation	Frame size

All brake resistors are to be installed outside the converter module.

The JBR brake resistors are built-in to an IP20 metal housing.

The SACE brake resistors are built-in to an IP21 metal housing.

The SAFUR brake resistors are built-in to an IP00 metal frame.

Maximum braking power of the ACS880 equipped with the standard chopper and the standard resistor

P_{brcont}	Continuous brake chopper power. The value applies to the minimum resistance value. With a higher resistance value the P_{brcont} may increase in some ACS880 units.
R	Resistance value for the listed resistor type.
R_{min}	Minimum allowable resistance value for the brake resistor.
E_r	Energy pulse that the resistor assembly will withstand (400 s duty cycle). This energy will heat the resistor element from 40 °C to the maximum allowable temperature.
P_{rcont}	Continuous power (heat) dissipation of the resistor when placed correctly. Energy E_r dissipates in 400 seconds.

Brake resistor	Height (mm)	Width (mm)	Depth (mm)	Weight (kg)

Heat loss of section with braking resistors is the same as braking power

Maximum braking power of the ACS880 equipped with the standard chopper and the standard resistor

$P_{br,max}$	Maximum short time braking power.
R	Recommended braking resistor resistance. Also nominal resistance of corresponding SAFUR resistor.
I_{max}	Maximum peak current per chopper during braking. Current is achieved with recommended resistor resistance.
$P_{cont.}$	Maximum continuous braking power. Continuous power (heat) dissipation of the resistor when placed correctly. Energy E_r dissipates in 400 seconds.
E_r	SAFUR resistor nominal braking capacity without forced cooling. Energy pulse that the resistor assembly will withstand (400 s duty cycle). This energy will heat the resistor element from 40 °C to the maximum allowable temperature.
$P_{br.}$	Braking power during corresponding cycle load: 1min/5min = 1 minute braking with power $P_{br.}$ and 4 minutes unload. 10 s/60 s = 10 second braking with power $P_{br.}$ and 50 seconds unload.
I_{rms}	Corresponding rms current per chopper during load cycle.
R_{min}	Minimum allowable resistance value for the brake resistor.

Dimensions

Resistor	
R_{min}	Minimum allowed resistance value of the brake resistor for one phase of the brake module.
R_{max}	Resistance value of the brake resistor for one phase of the brake module corresponding to the maximum achieved continuous braking power.

Note: Connect one resistor per brake module phase. For example, a brake unit of frame size 2xR8i including two brake modules → 2 x 3 resistors are needed.

Typical ratings for no-overload use

I_{dc}	Total input DC current of brake unit.
I_{rms}	Total rms DC output phase current of brake unit.
I_{max}	Peak brake current (DC) per chopper module phase.
$P_{cont,max}$	Maximum continuous braking power per brake unit.

Cyclic load (1 min/5 min)

I_{dc}	Total input DC current of brake unit during a period of 1 minute with braking power P_{br} .
I_{rms}	Total rms DC current per brake unit phase during a period of 1 minute with braking power P_{br} .
P_{br}	Short term braking power

Frame size	Height (mm)	Width (mm)	Depth (mm)	Weight (kg)

No overload use

I_{dc} input	Maximum continuous input DC current
I_{rms} output	Maximum continuous output current
P_N	Maximum continuous output power
I_{max} output	Maximum instantaneous output current
I_{p2p}	Maximum output ripple current

Fast/heavy load cycle

I_{fast}	Continuous output current allowing 10 s of I_{max} every 60 seconds
I_{fast}	Continuous output power allowing 10 s of I_{max} every 60 seconds
I_{Ld}	Continuous output current allowing overload of 150% I_{Hd} for 1 min every 5 min
P_{Ld}	Continuous output power allowing 150% I_{Hd} for 1 min every 5 min

du/dt filters

du/dt filtering suppresses inverter output voltage spikes and rapid voltage changes that stress motor insulation. Additionally, du/dt filtering reduces capacitive leakage currents and high frequency emission of the motor cable as well as high frequency losses and bearing currents in the motor. The need for du/dt filtering depends on the motor insulation. For information on the construction of the motor insulation, consult the manufacturer.

If the motor does not fulfill the following requirements, the lifetime of the motor might decrease. Insulated N-end (non-driven end) bearings and/or common mode filters are also required for motor bearing currents with motors bigger than 100 kW. For more information, please see the ACS880 hardware manuals.

Please see below about how to select a filter according to the motor.

Filter selection table for ACS880

Motor type	Nominal AC supply voltage	Requirements for		
		Motor insulation system	ABB du/dt and common mode filters, insulated N-end motor bearings	
			$P_N < 100 \text{ kW}$ and frame size < IEC 315	$100 \text{ kW} \leq P_N < 350 \text{ kW}$ or IEC 315 $\leq$ frame size < IEC 400
			$P_N < 134 \text{ hp}$ and frame size < NEMA 500	$134 \text{ hp} \leq P_N < 469 \text{ hp}$ or NEMA 500 $\leq$ frame size $\leq$ NEMA 580
ABB motors				
Random-wound M2__, M3__ and M4__	$U_N \leq 500 \text{ V}$	Standard	–	+ N
	$500 \text{ V} < U_N \leq 600 \text{ V}$	Standard	+ du/dt	+ du/dt + N
		or		
		Reinforced	–	+ N
	$600 \text{ V} < U_N \leq 690 \text{ V}$ (cable length $\leq 150 \text{ m}$)	Reinforced	+ du/dt	+ du/dt + N
$600 \text{ V} < U_N \leq 690 \text{ V}$ (cable length > 150 m)	Reinforced	–	+ N	
Form-wound HX__ and AM__	$380 \text{ V} < U_N \leq 690 \text{ V}$	Standard	n/a	+ N + CMF
Old ¹⁾ form-wound HX__ and modular	$380 \text{ V} < U_N \leq 690 \text{ V}$	Check with the motor manufacturer	+ du/dt with voltages over 500 V + N + CMF	
Random-wound HX__ and AM__ ²⁾	$0 \text{ V} < U_N \leq 500 \text{ V}$	Embedded wire with fiber glass taping	+ N + CMF	
	$500 \text{ V} < U_N \leq 690 \text{ V}$		+ du/dt + N + CMF	
HDP	Consult the motor manufacturer.			
Non-ABB motors				
Random-wound and form-wound	$U_N \leq 420 \text{ V}$	Standard $\dot{U}_{LL} = 1300 \text{ V}$	–	+ N or CMF
	$420 \text{ V} < U_N \leq 500 \text{ V}$	Standard $\dot{U}_{LL} = 1300 \text{ V}$	+ du/dt	+ du/dt + N or + du/dt + CMF
		or		
		Reinforced: $\dot{U}_{LL} = 1600 \text{ V}$, 0.2 microsecond rise time	–	+ N or CMF
	$500 \text{ V} < U_N \leq 600 \text{ V}$	Reinforced: $\dot{U}_{LL} = 1600 \text{ V}$	+ du/dt	+ du/dt + N or + du/dt + CMF
		or		
		Reinforced: $\dot{U}_{LL} = 1800 \text{ V}$	–	+ N or CMF
	$600 \text{ V} < U_N \leq 690 \text{ V}$	Reinforced: $\dot{U}_{LL} = 1800 \text{ V}$	+ du/dt	+ du/dt + N
Reinforced: $\dot{U}_{LL} = 2000 \text{ V}$, 0.3 microsecond rise time		–	+ N or CMF	

¹⁾ Manufactured before 1.1.1998. ²⁾ For motors manufactured before 1.1.1998, check for additional instructions with the motor manufacturer.

The abbreviations used in the table are defined below

Abbr.	Definition
U_N	Nominal AC line voltage.
$\dot{U}_{LL}$	Peak line-to-line voltage at motor terminals which the motor insulation must withstand.
P_N	Motor nominal power.
du/dt	du/dt filter at the output of the drive. Available both as standard and as an optional add-on kit from ABB.
CMF	Common mode filter. Depending on the drive type, CMF is available from ABB as a factory-installed option (+E208) or as an optional add-on kit.
N	N-ned bearing: insulated motor non-drive end bearing.
n/a	Motors of this power range are not available as standard units. Consult the motor manufacturer.

du/dt filters

Applicability

Separate du/dt filters are available for ACS880-01/-04. Unprotected IP00 filters must be placed into an enclosure that provides an adequate degree of protection. ACS880-104 parallel connected R8i modules ranging from 380 to 690 V have du/dt filters built-in as standard. du/dt filters are also available as standard for 1xR8i, 690 V.

¹⁾ Values are for three single-phase filters.

²⁾ 3 filters included, dimensions apply for one filter.

Dimensioning tool for selecting the optimal drive

DriveSize is designed to help select the optimal drive, motor or transformer for the application. Based on data supplied by the user, the tool calculates and suggests which drive and motors to use. DriveSize uses technical specifications found in our technical catalogs and manuals. It provides default values which can be changed by the user.

DriveSize creates documents for drive and motor dimensioning based on the load, network and cooling data provided by the user. Dimensioning results can be viewed graphically and numerically in the tool.

The tool can be used to calculate currents and network harmonics for a single supply unit or a whole system. The user can import a user-defined motor database by using a separate template that comes with the installation package. DriveSize is easy to use and has shortcut keys to make navigation quicker.

Easy to access and use

DriveSize is a free software and can be used either online or downloaded for PC from www.abb.com/drives.

Drives service

Your choice, your future

The future of your drives depends on the service you choose.

Whatever you choose, it should be a well-informed decision. No guesswork. We have the expertise and experience to help you find and implement the right service for your drive equipment. You can start by asking yourself these two critical questions:

- Why should my drive be serviced?
- What would my optimal service options be?

From here, you have our guidance and full support along the course you take, throughout the entire lifetime of your drives.

Your choice, your business efficiency

ABB Drive Care agreement lets you focus on your core business. A selection of predefined service options matching your needs provides optimal, more reliable performance, extended drive lifetime and improved cost control. So you can reduce the risk of unplanned downtime and find it easier to budget for maintenance.

We can help you more by knowing where you are!

Register your drive at www.abb.com/drivereg for extended warranty options and other benefits.

Service to match your needs

Your service needs depend on your operation, life cycle of your equipment and business priorities. We have identified our customers' four most common needs and defined service options to satisfy them. What is your choice to keep your drives at peak performance?

Is uptime your priority?

Keep your drives running with precisely planned and executed maintenance.

Example services include:

- ✓ Life Cycle Assessment
- ✓ Installation and Commissioning
- ✓ Spare Parts
- ✓ Preventive Maintenance
- ✓ Reconditioning
- ✓ ABB Drive Care agreement
- ✓ Drive Exchange

Is rapid response a key consideration?

If your drives require immediate action, our global network is at your service.

Example services include:

- ✓ Technical Support
- ✓ On-site Repair
- ✓ Remote Support
- ✓ Response time agreements
- ✓ Training

Need to extend your assets' lifetime?

Maximize your drive's lifetime with our services.

Example services include:

- ✓ Life Cycle Assessment
- ✓ Upgrades, Retrofits and Modernization
- ✓ Replacement, Disposal and Recycling

Is performance most critical to your operation?

Get optimal performance out of your machinery and systems.

Example services include:

- ✓ Advanced services
- ✓ Engineering and Consulting
- ✓ Inspection and Diagnostics
- ✓ Upgrades, Retrofits and Modernization
- ✓ Workshop Repair
- ✓ Tailored services

Operational efficiency

Rapid response

Life cycle management

Performance improvement

Drives service

A lifetime of peak performance

You're in control of every life cycle phase of your drives. At the heart of drive services is a four-phase product life cycle management model. This model defines the services recommended and available throughout drives lifespan.

Now it's easy for you to see the exact service and maintenance available for your drives.

ABB drives life cycle phases explained:

		Active	Classic	Limited	Obsolete
		Full range of life cycle services and support		Limited range of life cycle services and support	Replacement and end-of-life services
Product	Services	Product is in active sales and manufacturing phase.	Serial production has ceased. Product may be available for plant extensions, as a spare part or for installed base renewal.	Product is no longer available.	Product is no longer available.
		Full range of life cycle services is available.	Full range of life cycle services is available. Product enhancements may be available through upgrade and retrofit solutions.	Limited range of life cycle services is available. Spare parts availability is limited to available stock.	Replacement and end-of-life services are available.

Keeping you informed

We notify you every step of the way using life cycle status statements and announcements.

Your benefit is clear information about your drives' status and precise services available. It helps you plan the preferred service actions ahead of time and make sure that continuous support is always available.

Step 1 Life Cycle Status Announcement

Provides early information about the upcoming life cycle phase change and how it affects the availability of services.

Step 2 Life Cycle Status Statement

Provides information about the drive's current life cycle status, availability of product and services, life cycle plan and recommended actions.
